Project Title: Online food ordering system

---

1. <u>Preliminary Pages</u>

Title Page

- Project Title: “Online Student Feedback System”|

- University: Savitribai Phule Pune University (SPPU)
- Student Names: Inayat Maniyar & Darshan
- Guide Name: Ganesh Sir
- Department: TYBCS

---

2. Introduction & Scope

- Problem Definition: Traditional paper-based feedback is difficult to track, store, and analyze. This system automates the process, providing a secure login for administrators and students.
- Feasibility Study:
  - Technical: Developed using Java (JDK 8+) and Swing, requiring no heavy database installation.
  - Operational: User-friendly GUI allows even non-technical users to navigate easily.
- Project Scope: To provide a platform where students can rate courses (1–5) and provide comments, while admins can perform CRUD operations on that data.

3. Software Requirement Specification (SRS)

- Hardware Requirements: o Processor: Intel i3 or above. o RAM: 4GB minimum. o Storage: 100MB for application and text logs.
- Software Requirements:
  - Operating System: Windows/Linux/macOS. o Language: Java (OpenJDK/Oracle JDK). o IDE: Eclipse, NetBeans, or IntelliJ IDEA.
- Functional Requirements:
  - Admin/Student Login Authentication.
  - Feedback submission with Name, Course, Rating, and Comments. o Search functionality by Student Name. o Admin capability to Edit or Delete specific feedback entries.

4. System Analysis & Design

[STUDENT]	[ADMIN]
Login	Login
Give feedback about college	View Given Feedbacks
Submit Feedback	Search by specific students given Feedbacks

- System Architecture: The system follows a modular approach.

- MainLogin.java: The entry point for selecting user type.
- FeedbackForm.java: The data entry interface.
- AdminViewFeedback.java: The management console using BoxLayout and JScrollPane.

- Data Design: Data is stored in a flat-file format (feedback.txt).

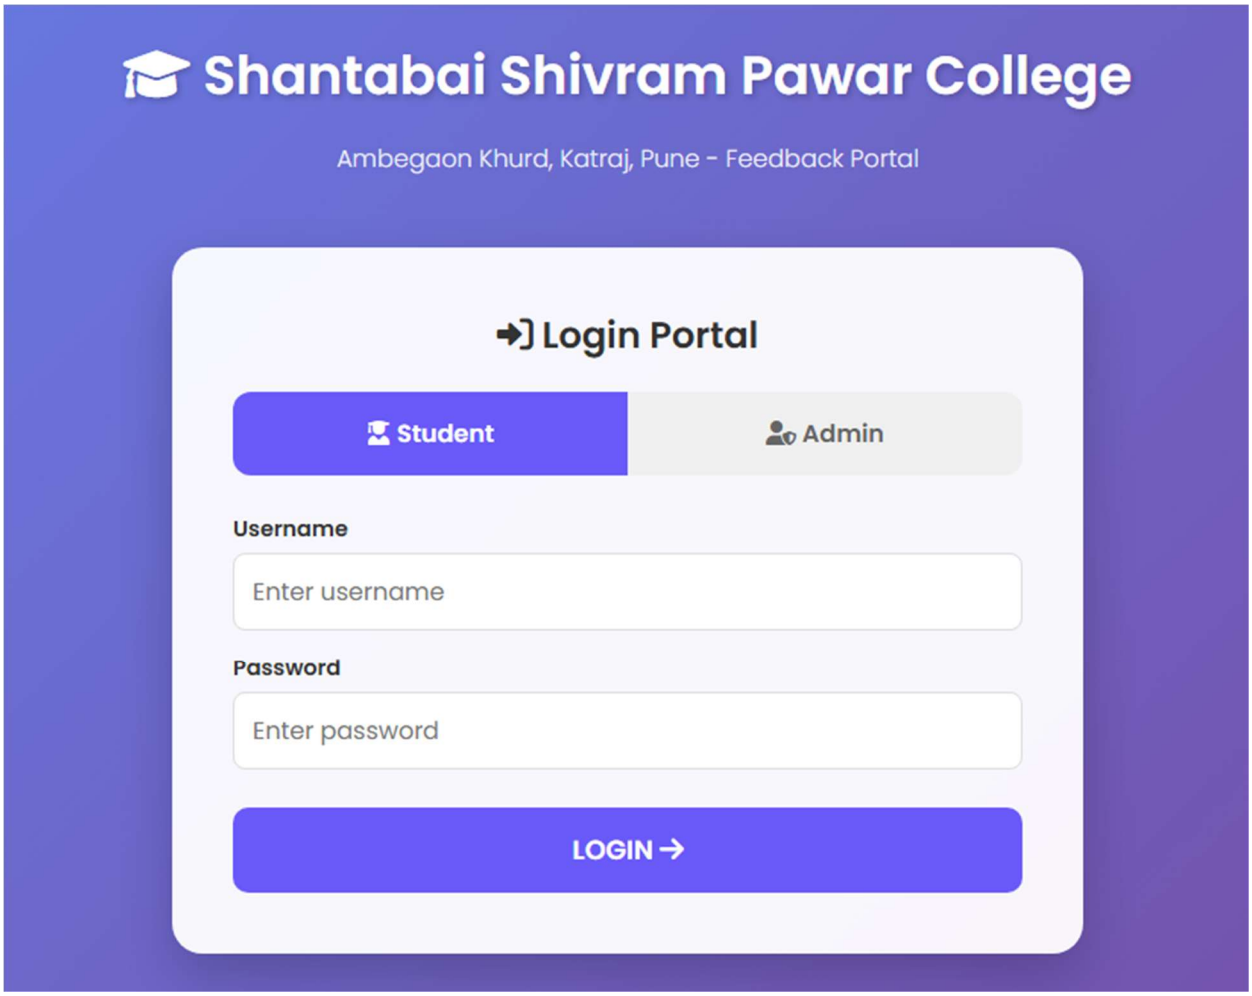
- Format: Student Name | Class | Academic Year | Rating | Feedback | DateTime.
- Normalization: While not a relational database, the data is structured with a unique separator ---------- to distinguish records.

---

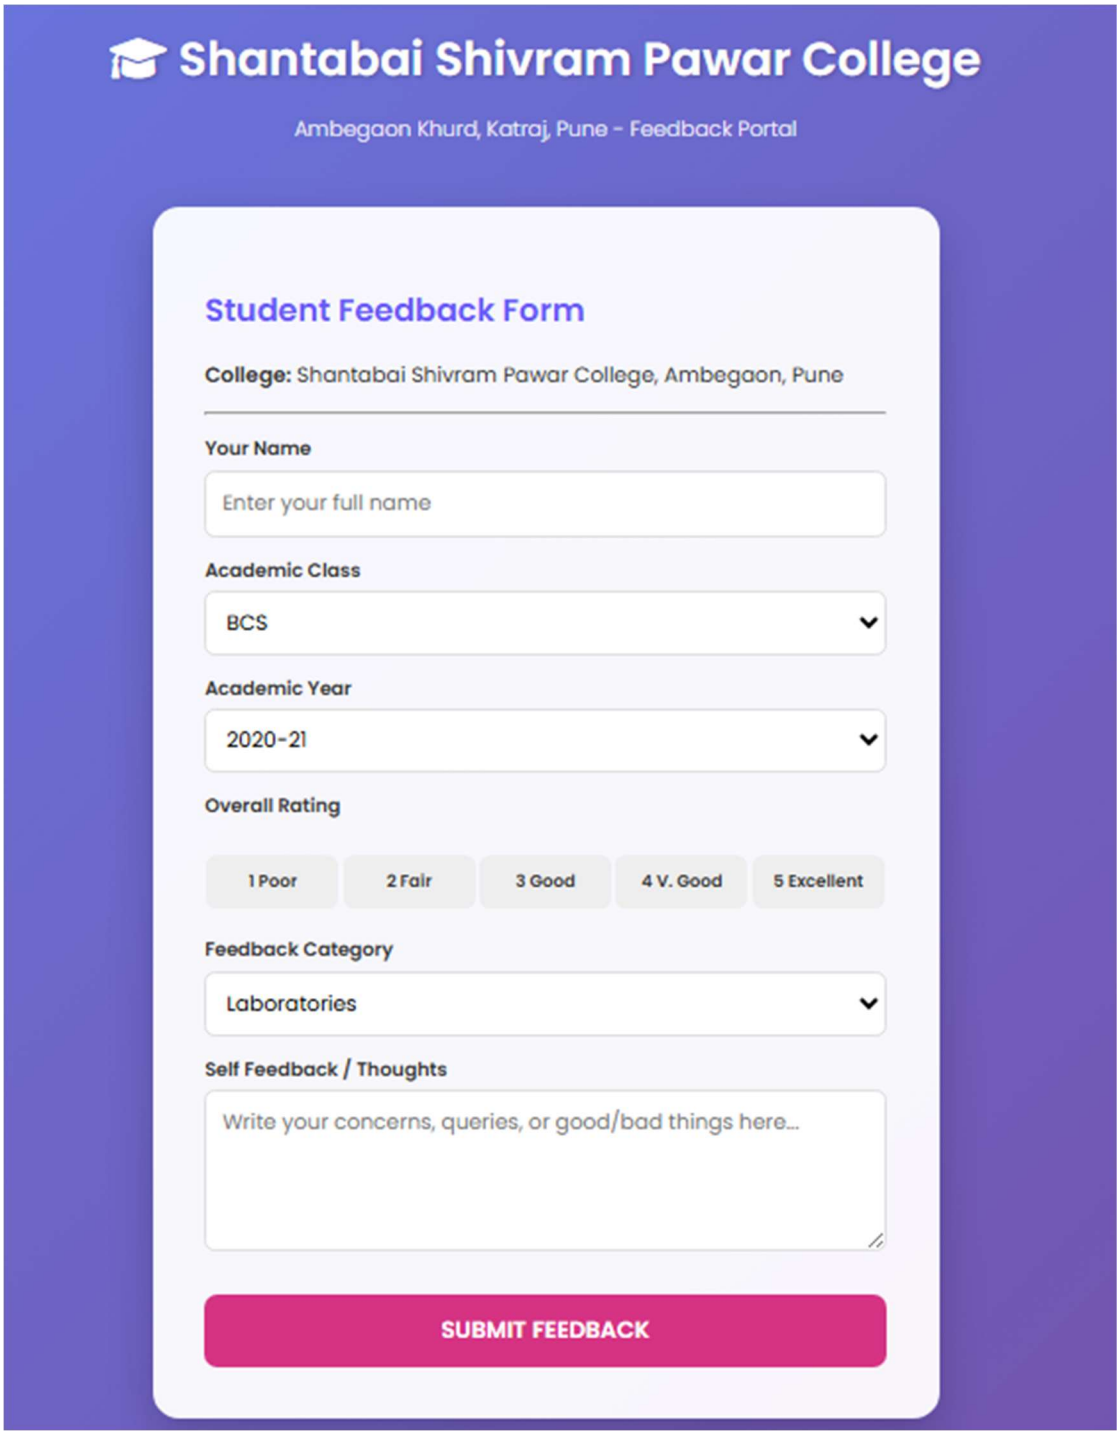
5. Implementation & Testing

Key Classes & Logic

Main Login Interface -



Filling feedback Interface -



Final Result/Output -

1. Authentication: AdminLogin uses hardcoded credentials (admin/admin123) for secure access.
2. File I/O: FileWriter with append: true is used in AdminFeedbackForm to save records without overwriting.
3. Search Logic: StudentViewFeedback uses line.toLowerCase().contains(name.toLowerCase()) for flexible searching.

6. Conclusion & Future Scope

- Conclusion: The project successfully implements a functional feedback loop. It streamlines the communication between students and the administration of the TYBCS department. Limitations:
    - Data is stored in a text file, which is less secure than an encrypted SQL database.
    - Simultaneous access by multiple users may cause file-locking issues.
- Future Scope:
    - Integration with MySQL/PostgreSQL for better data integrity.
    - Generating Graphical Reports (Pie charts/Bar graphs) based on ratings.
    - Email notifications to faculty when new feedback is submitted.

7. Bibliography

- Books: Java: The Complete Reference by Herbert Schildt.

- Websites:

1. Oracle Java Documentation (docs.oracle.com)
2. Stack Overflow (Java Swing UI Layouts)
3. SPPU Official Syllabus Guidelines for TYBCS Projects.

SHANTABAI SHIVRAM PAWAR COLLEGE

Ambegaon Bk, Pune -46

CERTIFICATE

Department of
Computer Science & Application

This is to certify that Mr./Miss :_____ having Exam Seat No:_____ of F.Y./S.Y./T.Y (B.C.A / B.C.S) has satisfactorily completed practical syllabus prescribed by the University Of Pune for Subject _____. **Semester** _____ during the academic year 20 20 .

His /Her performance is Satisfactory /Not satisfactory.

Subject In charge **Head of the Department**

Internal Examiner **External Examiner**

Date:
